Raipur, Chhattisgarh | leetcode.com/u/krishivperiwal

Education

International Institute of Information Technology, Naya Raipur 2025 – Present
B.Tech in Computer Science *CGPA: 9.16/10.0*

Projects

Distributed Job Queue & Dashboard | *TypeScript, Node.js, PostgreSQL, Redis, AWS, Docker, React* 2026
- Built a distributed job queue and image-thumbnail processing service with a Postgres-backed queue using row-level locking (`FOR UPDATE SKIP LOCKED`) for safe concurrent job claiming across multiple workers
- Implemented exponential backoff retries and a dead-letter mechanism, then migrated the queue to real AWS SQS with a DLQ redrive policy for automatic retry and failure handling
- Containerized the API and worker with multi-stage Docker builds and deployed to AWS ECS Fargate with RDS PostgreSQL, ElastiCache Redis, and scoped least-privilege IAM roles per service
- Built a React dashboard for job submission, live status polling, and failed-job replay, backed by a Redis-cached queue-depth counter for fast reads

Job Application Tracker | *React, Node.js, Express, MongoDB, Cloudinary* | Live | API | Client 2026
- Built a full stack MERN app for tracking job applications and interview stages with JWT auth, protected routes, and Context API
- Developed REST APIs with filtering, pagination, sorting, and search; integrated Cloudinary and Multer for resume uploads
- Built analytics dashboard using MongoDB aggregation pipelines with rate limiting and centralized error handling

Role-Based Issue Tracker | *React, Node.js, Express, MongoDB* | Live | API | Client 2026
- Built a full stack MERN issue tracking system with RBAC — only creators and assignees can modify issues; admins manage all content
- Built role-aware React UI where admin and regular user see different controls based on decoded JWT payload
- Designed issue lifecycle (open → in-progress → closed), assignee management, and comment system with delete permissions

URL Shortener | *React, Node.js, Express, MongoDB* | Live | API | Client 2026
- Built a full stack MERN URL shortening service with JWT auth, protected routes, and per-user URL management
- Designed analytics page with Chart.js showing clicks over time, days active, and average clicks per day
- Used indexed MongoDB queries for fast short ID lookup; implemented unique short ID generation with input validation

Technical Skills

Languages: JavaScript (ES6+), TypeScript, C++
Backend & Databases: Node.js, Express.js, PostgreSQL, MongoDB, Mongoose, Redis, RESTful APIs, Zod
Cloud & DevOps: AWS (SQS, ECS Fargate, RDS, ElastiCache, CloudWatch, IAM), Docker, Docker Compose
Frontend: React.js, Vite, Tailwind CSS, React Router v6, Context API, Redux Toolkit, Axios
Auth & Security: JWT, bcrypt, Rate Limiting, RBAC, Least-Privilege IAM Policies
Tools: Git, Postman, Cloudinary, Multer
Concepts: Distributed Systems, Message Queues, MERN Stack, MVC Architecture, Middleware, Error Handling, Aggregation Pipelines

Achievements

Drishti — CSIDC Hackathon Winner (50+ teams) | *Python, Image Processing* | GitHub 2026
- Built an AI-powered geospatial compliance system that detects land encroachments from satellite imagery
- Integrated geospatial reference data to compare actual land usage with official records and generate compliance reports

Solved **210+ DSA problems** on LeetCode

Extracurricular Activities

Volunteer at **SSNM** and **ICISS** international conferences — coordinated logistics for international speakers and technical sessions
Sponsorship Team Member, **MUN Club** — led outreach to **10+** potential sponsors for inter-college events
